

SYSTEMS
INFORMATION
BUSINESS

In our increasingly digital world, businesses face a critical need for professionals who have a thorough understanding of technology and can effectively use computer software to meet company goals and objectives while also being able to speak the language of business.

At the UA Little Rock School of Business, our business information systems program prepares students to fill this need by teaching them computer applications development in the business environment and analytics-based decision making. Degree offerings include a Bachelor of Business Administration in Business Information Systems — with specializations available in business analytics, information assurance and security, and management — which prepares students for a career as a business tech professional.

This program features flexible course schedules, with the option to complete the program fully online, specializations, IT student organizations, and networking opportunities.

Students are also offered opportunities to enhance their desirability to future employers and increase their earning potential through workshops, competitions, and field trips to regional corporations such as Microsoft, Tyson Foods, and Walmart.
